Education

- Master's Degree in Computer Science and Cybersecurity Engineering** 09/2023 – 06/2026
ECE Paris, Paris
- University of Oslo, Norway** 08/2025 – 12/2025
Engineering exchange program: ethical hacking, network and communication security, and cloud computing
- Preparatory Classes for Engineering Schools (CPGE) – MPSI/MP** 09/2021 – 06/2023
Lycée Pierre Gilles de Gennes, Paris

Professional Experience

Cybersecurity Engineer (Internship) 03/2026 – Present
Airbus Helicopters, Marignane, France

- Contributed to **vulnerability management** operations within a transversal security team (SOC, Endpoint Protection, Architecture): integration of asset inventory (CMDB), automated data collection and classification, covering workstations, servers, and industrial systems.
- Designed and implemented a **vulnerability scanning architecture** to enhance detection coverage and accuracy across the enterprise environment, including OT/IT convergence zones.
- Developed **predictive data analytics** capabilities: correlation of vulnerability data with asset criticality to prioritize remediation and model cybersecurity impact, applying machine learning principles.
- Built a **real-time dashboard** with KPIs and predictive indicators, integrated into the security department's governance framework to drive corrective action plans.

Cybersecurity Engineer (Internship) 04/2025 – 08/2025
AlticeDo, Santo Domingo, Dominican Republic

- Managed security incident response (SOC) through **forensic analysis** and coordination of advanced response procedures to reduce resolution times.
- Deployed and configured **Fortinet** solutions (FortiGate, FortiMail Cloud, FortiAnalyzer) to strengthen the network security posture.
- Conducted vulnerability scans and assessments using **Tenable** to identify and prioritize remediation across the internal perimeter.
- Administered **Trellix EDR** solutions, automated Active Directory audit reports, and performed threat analysis through **OSINT** tools.

Professional Discovery Internship 06/2024 – 07/2024
Consulate General of the Dominican Republic, Paris

- Optimized administrative workflows through the implementation of technical solutions and **automation of document management**.
- Analyzed financial and organizational operations to formulate strategic recommendations for improvement.

Projects

Mi SaludRD (SaaS B2B) [Website](#)
Full-stack architecture and development of a SaaS platform (Mi SaludRD) for healthcare professionals in the Dominican Republic (final deployment phase). Implementation of appointment management, payments (**Stripe**), authentication (**Google**), and database (**Supabase**) for web (**Next.js**) and mobile (**Flutter**).

Technologies: Next.js, Typescript, Tailwind, Supabase, Stripe, Flutter, Resend, Sentry

Vulnerability Scanner (open source) [GitHub](#)
Developed a security assessment tool in **Bash** for Red Teams (OSINT, network, web, exploitation). Designed an interactive interface and adaptive modes to optimize **pentesting** audits.

Technologies: Bash scripting, Nmap, Nuclei, Subfinder, OSINT, Gobuster, Metasploit.

Encryption and PKI Module (open source) [GitHub](#)
Created a cross-platform file encryption utility in **Bash** and **OpenSSL**. Implementation of 8 modern algorithms (AES-256-GCM, ChaCha20), secure key management through **ECC** cryptography, and **X.509** certificate handling.

Technologies: Bash scripting, OpenSSL, Debian packaging, GitHub Actions.

SABER [Live Demo](#)
Designed a secure web platform with **Next.js** for document encryption/decryption. Developed the **backend** and interface to ensure the confidentiality of data exchanges.

Technologies: Next.js, JavaScript, Web Cryptography, Vercel.

Skills

Certifications	Cisco Introduction to Cybersecurity • CompTIA Security+ (SY0-701)
Programming	C, C#, Java, JavaScript, PowerShell, Python, SQL, Bash
Systems & Security	Kali Linux, Linux, Nmap, Wireshark, Metasploit, Qualys, Tenable
Platforms	TryHackMe (profile)
Languages	French (Native), Spanish (Native), English (Fluent), Korean (Beginner)
